### **GTC celebrates attaining full set of Lloyd's accreditations**

GTC, the nationwide provider of utility infrastructure to the new-build market, is celebrating gaining WIRS and MURS accreditations. These standards confirm the company's industry-leading reputation by completing the full set of GTC's Lloyd's technical accreditations, and also demonstrate GTC's eagerness to meet the needs of customers who would often like an MU service.

The Water Industry Registration Scheme (WIRS) and Multi Utility Recognition Status (MURS) accreditations add to GTC's already strong list of Gas Industry Registration Scheme (GIRS), and National Electricity Registration Scheme (NERS) accreditations. GTC has the advantage of being able to hold both GIRS and NERS as it operates under two independent Ofgem-licenses, one for gas and one for electricity.

GTC joins an elite list of just a few active providers that are MURS registered. The accreditations are independently audited by Lloyd's Register on behalf of the various industry bodies and are awarded in recognition of high technical, quality and safety standards.

Clive Linsdell, Managing Director at GTC, says: "To have all five accreditations is quite an achievement. We are very proud to have been recognised for our high quality of service across all areas of our business. Whilst our existing clients will be aware of our exacting standards, the accreditations are useful to instil confidence in new working relationships."

### **Notes for Editors**

GTC is a nationwide provider of utility infrastructure to the new-build market and provides cost-effective Gas, Electricity, Dual Fuel and Multi Utility solutions.

Over the past decade, GTC has become one of Britain's biggest providers of utility infrastructure. GTC works with all house builders, consultants and major developers in the British mainland new-build market. Currently over 500,000 homes and commercial premises are connected or contracted to be connected to a GTC network.

Under its two Ofgem-licensed businesses - GTC Pipelines Ltd (for gas) and The Electricity Network Company Ltd (for electricity) - GTC owns and operates networks in perpetuity, whether built by its own construction division or by other accredited infrastructure providers. Because of this on-going responsibility, GTC ensures that exacting standards are adhered to from the outset.

GTC holds all four Lloyd's utility technical accreditations:

- Water Industry Registration Scheme (WIRS)
- Multi Utility Recognition Status (MURS)
- Gas Industry Registration Scheme (GIRS)
- National Electricity Registration Scheme (NERS)

GTC is owned by Prime Infrastructure, a company operating a diverse portfolio of quality assets worldwide.
