ProNet – new Completions and Well Intervention Reporting Services, Launched by IDS

IDS, the largest provider of web-based daily reporting services to the upstream oil and gas industry, is launching at Offshore Europe its new Completions and Well Intervention reporting package, ProNet.

ProNet utilises a completely new, fully-integrated drawing package and campaign life-cycle manager, allied with IDS's established DataNet2 site reporting services. Campaign Manager, the IDS life-cycle and well integrity tracking service, gives the completions engineer a full history of the well from spud to abandonment.

Along with the entire suite of DataNet2 reporting tools, ProNet is web-based and, therefore, accessible at any time from anywhere across the globe. Rich internet applications and the Web 2.0 environment enhance the user experience:

Borehole visualisation is time-tracked giving the user an on-screen walk through of the entire well construction and intervention history, simply by dragging a slider bar. The borehole/completions diagram is fully interactive with zoom-to-view and zoom-to-scale functions. Clicking on any on-screen layer or component pulls up the relevant data set for review or in-place editing. Hard copies of the diagram can be generated for distribution and filing at the touch of a button.

Douwe Franssens, General Manager at IDS, says: "With the integration of ProNet into our master DataNet2 database of reporting services, the completions engineer has all the current and historical well data available in a single source. Our clients find this an enormous advantage, not only in terms of time saving, but also because ending the need for duplication limits the risk of errors."

ProNet data captures:

- Daily completions
- CTU
- Perforations
- Production fluid and string components
- Production test
- Sand control
- Stimulation
- Swabbing
- Wellhead

As ProNet is a subset of the DataNet2 database, the associated cultural information is also available:

- Well file
- Rig/package file
- Casing and cementing
- Surveys
- Drilling fluids

-ends-

Notes for Editors

About IDS

IDS provides intuitive end-to-end, web-delivered, upstream reporting services, with full support 24 hours a day, 365 days a year. DataNet and now DataNet2, is a suite of powerful tools based around a central concept - enabling oil and gas reports and data to be easily acquired, managed, shared, viewed and delivered across the web or via the client's network. DataNet2 is the next generation of web-based reporting services, using the features of Rich Internet Applications, it is WITSML compliant and works in the Web 2.0 environment. IDS supports the drilling project life-cycle from initial concept to final decommissioning.
