08 September 2009  
Hall 4, Stand No. F12

## **VisNet - Advanced Data Analysis from IDS. Aberdeen born. Globally successful.**

IDS is experiencing success with its ground-breaking VisNet advanced data analysis tool, available for demonstration on Stand F12 at Offshore Europe.

As the largest provider of web-based daily reporting services to the upstream oil and gas industry, IDS felt it was vital to create an overarching analysis tool to bring additional time and cost savings to its clients. VisNet has been created by three of IDS's Aberdeen-based experts to have a unique, web-delivered functionality that has been met with great enthusiasm from the global upstream industry.

VisNet allows the user to build layered queries on any part of the DataNet2 database.

DataNet2 is a web-delivered reporting package covering E&P, Supply Chain Management and Data & Knowledge Management services. VisNet enables the dragging and dropping of tables and fields into any work area of DataNet2 and then allows the application of operators and filters to obtain specific results.

The main features and advantages of VisNet include:

- Analysis of multiple operations to discover data trends and maximise performance
- Increased visibility of the causes of downtime
- Analysis of data across multiple DataNet2 modules
- Building of queries using a drag-and-drop interface
- Refining of query filters to drill-down to the required data
- Creating and grouping calculated fields to discover data over a specific time period
- Designing and building a flexible report using drag-and-drop component
- Visualising data using graphs
- Creating generic templates to run against current and future operation
- Generating multiple output types of the same report (MS Office formats, PDF and more)

Reuben Wee, Chief Technology Officer at IDS, says: "We have tried to create such an all-encompassing data analysis tool on a number of occasions over the years but until now, were unable to create a system that we felt truly worthy of the IDS stamp. Our team have done an outstanding job in bringing this product to the client. VisNet enables clients to really make the most of their data in a fast and simple manner."

### **Notes for Editors**

#### **About IDS**

IDS provides intuitive end-to-end, web-delivered, upstream reporting services, with full support 24 hours a day, 365 days a year. DataNet and now DataNet2, is a suite of powerful tools based around a central concept - enabling oil and gas reports and data to be easily acquired, managed, shared, viewed and delivered across the web or via the client's network. DataNet2 is the next generation of web-based reporting services, using the features of Rich Internet Applications, it is WITSML compliant and works in the Web 2.0 environment. IDS supports the drilling project life-cycle from initial concept to final decommissioning.
